For 1991, volumes 80–85 (36 issues) have been announced. The subscription price for these volumes is Dfl. 2010.00 (US$ 1135.00). Postage and handling amount to Dfl. 180.00 (US$ 95.00). Therefore the total price for 1991 is Dfl. 2190.00 (US$ 1230.00). The Dutch guilder price is definitive, dollar prices are for guidance only.

Subscriptions should be sent to the publisher, Elsevier Science Publishers B.V., Journals Department, P.O. Box 211, Amsterdam, The Netherlands, or to any subscription agent or bookseller. Claims for issues not received should be made within three months of publication. If not, they cannot be honoured free of charge.

© Elsevier Science Publishers B.V. All rights reserved. No part of this publication may be reproduced, stored in a retrieval system or transmitted in any form or by any means, electronic, mechanical, photocopying, recording or otherwise, without the prior permission of the publisher, Elsevier Science Publishers B.V. (North-Holland Physics Publishing Division), P.O. Box 103, 1000 AC Amsterdam, The Netherlands.

Special regulations for authors. Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

Submission to this journal of a paper entails the author's irrevocable and exclusive authorization of the publisher to collect any sums or considerations for copying or reproduction payable by third parties (as mentioned in article 17 paragraph 2 of the Dutch Copyright Act of 1912 and in the Royal Decree of June 20, 1974 (S. 351) pursuant to article 16b of the Dutch Copyright Act of 1912) and/or to act in or out of Court in connection therewith.

Special regulations for readers in the USA. This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the US Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 27 Congress Street, Salem, MA 01970, USA. If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1981 may be copied for a per-copy fee of US$ 2.25, also payable through the Center. (N.B. For review journals this fee is $ 0.25 per copy per page.) This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purposes, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

No responsibility is assumed by the Publisher for any injury and/or damage to persons or property as a matter of product liability, negligence or otherwise, or from any use or operation of any methods, products, instructions or ideas contained in the material herein. Although all advertising material is expected to conform to ethical standards, inclusion in this publication does not constitute a guarantee or endorsement of the quality or value of such product or of the claims made of it by its manufacturer.

Published bi-monthly

Instructions to authors

The journal publishes short communications and full length articles in the field of optics and quantum electronics.

Short communications are brief reports of significant, original and timely research results that warrant rapid publication. The length of short communications is limited to six printed pages.

Full length articles are subject to the same criteria of significance and originality but give a more complete and detailed account of the research results. The discussion of experiments should bear sufficient relation to theory, and theoretical papers should refer to experimental verification.

All manuscripts should contain an abstract and an introduction. In addition, full length articles need a conclusions section.

Manuscripts. Manuscripts should be typewritten originals with wide margins and double spacing of lines. Special care should be taken to indicate all characters which might cause confusion (e.g. o, 0, O; κ, k, K; X, x, $\times$, χ; z, Z; $\propto$, α; φ, ϕ, $\emptyset$; t, τ, T, Γ; $\langle$, $<$, $\rangle$, $>$; w, ω; P, p, ρ, etc.). All Greek letters and unusual characters must be identified in the margin the first time they occur in the text. All references must be numbered and must contain the names and initials of all authors. References should not contain footnotes. Figures should be original drawings, sharp glossy prints of about manuscript size, or camera-ready high contrast prints from laser printers. Lettering should be done in such a way that the figures can be reduced to one-column width ($7\frac{1}{2}$ cm) with the reduced lettering at least 2 mm high. All figures must have figure captions typed double-spaced on a separate page. Manuscripts will not be returned unless requested by the author.

Submission. Contributions, written in clear English should be sent in triplicate to one of the editors whose addresses are given on the inside of the journal cover. Authors are advised to submit their paper to a geographically convenient editor.

Galley proofs. Authors of short communications will not receive galley proofs, unless they request them at the time of submission. Authors of full length articles will receive galley proofs.

Correspondence. All correspondence with the editors or publisher should contain full reference to the paper concerned, i.e. the full title, the names of all the authors as well as the date of submission. The letter of submission should include, if possible: the full mailing address, telephone, FAX, telex and bitnet number. Once the contribution has been accepted for publication, all further correspondence should be directed to the publisher: Drs. H. Oosterom, Editorial Department, North-Holland Physics, P.O. Box 103, 1000 AC Amsterdam, The Netherlands; telephone 31-20-5862632, FAX 31-20-5862580, telex 10704 espom nl, electronic mail Dialcom/Tgold/Memocom System 27:ESX010 or Bitnet NHPDESKED©ELSEVIER.NL

Colour illustrations. Illustrations in colour will be accepted where the use of colours is essential for the presentation. The decision on this rests with the Editors. The Publisher and the Author will each bear part of the extra costs involved. These arise from (a) the need to prepare colour-separated printing films by means of scanning the original colour figures ("figure processing costs"), and (b) the need to print four colours ("printing costs"). The "figure processing costs" are typically on a per figure basis (for exceptions see below). "Printing costs" are independent of the number of colour illustrations per page, but are dependent on the number of pages containing colour figures. Authors will be billed in Dutch Guilders (Dfl.) according to the following rates (the US$ rates in parentheses are *for your guidance* only; an exchange rate of 1 US$ = Dfl. 2.00 has been assumed). The printing costs for the first page are Dfl. 1200 (US$ 600) plus Dfl. 200 (US$ 100) for each additional page. The figure processing costs are Dfl. 200 (US$ 100) per figure. Where combined scanning can be used, the processing costs per figure are reduced by 15% (if two figures are combined) up to more than 50% (if eight figures are combined). These lower rates apply only if: (a) the various colour intensities of the figures are such that combined scanning produces acceptable results; (b) the reduction factor is exactly the same for each figure; (c) two or more illustrations are printed together on one page. Authors' requests for combined figures will be assessed and price quotations provided by the Publisher. For computer colour prints involving no more than four colours and no differentiation of shades, no "figure processing costs" will be charged if colour-separated originals are submitted. On each such original, register marks must be clearly indicated so as to ensure exact positioning of each colour when printing. Authors will be notified whether their colour-separated originals are suitable and the "figure processing costs" charges can be waived. Colour illustrations should be submitted as original colour photographs, transparencies, or 35 mm slides. Polaroid colour prints are *not* suitable. Please submit colour photographs and transparencies close to the size expected in publication. It should be noted that, in some instances, printing requirements will prevent figures from being located at the most desirable position in the text. The author receives 200 reprints with colour illustrations free of charge. More reprints can be ordered at the usual rates, and there will be *no* additional charge for reprints containing colour illustrations.

For purposes of compiling a **subject index** authors are requested to index their manuscript according to the following classification list:

1. *Propagation and transmission in homogeneous media* (interference, diffraction, coherence, polarization, geometrical optics, optical measurement techniques).
2. *Propagation and transmission in inhomogeneous media* (coherence in random turbulent media, scintillation, scattering from haze, fog, dust, etc., atmospheric optics).
3. *Optical information, image formation and analysis, optical computing* (Fourier transform optics, modulation and optical transfer functions, optical storage and retrieval, holography, pattern recognition, image processing and restoration, speckle).
4. *Optical communications* (optical waveguides, fiber optics).
5. *Atomic and molecular physics* (atomic and molecular spectra and interactions with photons, atomic and molecular collision processes and interaction, use of optical techniques for determining other properties).
6. *Condensed matter* (spectroscopy, optical properties of materials, use of optical techniques for determining other properties).
7. *Plasmas.*
8. *Lasers* (including laser beam interactions and applications).
9. *Nonlinear optics* (stimulated Raman, photon echoes, parametric oscillations and other interactions of radiation with matter, harmonic generation, bistability, beam trapping, self-induced transparency and related effects).
10. *X-ray optics and applications.*

In the absence of such indications by the author, the classification will be done by the Editor.

CLASSICS edited by Emil Wolf

PROGRESS IN OPTICS

Since the publication of Volume I in 1961, Progress in Optics has played a key role in optical science and related areas. Over the years the series has been recognized as a bible in the field. Below some of the volumes with the stamp of authority are listed.

Volume XIII

1976 xiv + 306 pages
US $74.25/Dfl.145.00
ISBN 0-7204-1513-6

Contents: Preface. On the validity of Kirchhoff's law of heat radiation for a body in a nonequilibrium environment *(H.P. Baltes)*. The case for and against semiclassical radiation theory *(L. Mandel)*. Objective and subjective spherical aberration measurements of the human eye *(W.M. Rosenblum and J.L. Christensen)*. Interferrometric testing of smooth surfaces. *(G. Schulz and J. Schwider)*. Self focusing of laser beams in plasmas and semiconductors *(M.S. Sodha, A.K. Ghatak and V.K. Tripathi)*. Alplanatism and isoplanatism *(W.T. Welford)*. Author index. Subject index. Cumulative index vols. I-XIII.

Volume XVIII

1980 xvi + 364 pages
US $92.25/Dfl.180.00
ISBN 0-444-85445-2

Contents: Preface. Graded index optical waveguides: A review *(A. Ghatak, K. Thyagarajan)*. Photocount statistics of radiation propagating through random and nonlinear media *(J. Perina)*. Strong fluctuations in light propagation in a randomly inhomogeneous medium *(V.I. Tatarskii and V.U. Zavorotnyi)*. Catastrophe optics: morphologies of caustics and their diffraction patterns *(M.V. Berry and C. Upstill)*. Author index. Subject index. Cumulative index vols. I-XVIII.

Volume XVII

1980 xiv + 362 pages
US $92.25/Dfl.180.00
ISBN 0-444-85309-X

Contents: Preface. Heterodyne holographic interferometry *(R. Dandliker)*. Doppler-free multiphoton spectroscopy *(E. Giacobino and B. Cagnac)*. The mutual dependence between coherence properties of light and nonlinear optical processes *(M. Schubert and B. Wilhelmi)*. Michielson stellar interferometry *(W.J. Tango and R.Q. Twiss)*. Self-focusing media with variable index of refraction *(A.L. Mikaelian)*. Author index. Subject index. Cumulative index vols. I-XVII.

Volume XX

1983 xviii + 400 pages
US $87.25/Dfl. 170.00
ISBN 0-444-86736-8

Contents: Preface. Some new optical designs for ultra-violet bidimensional detection of astronomical objects *(G. Courtès, P. Cruvellier, M. Detaille and M. Saïsse)*. Shaping and analysis of picosecond light pulses *(C. Froehly, B. Colombeau and M. Vampouille)*. Multi-photon scattering molecular spectroscopy *(S. Kielich)*. Colour holography *(P. Hariharan)*. Generation of tunable coherent vacuum-ultraviolet radiation *(W. Jamroz and B.P. Stoicheff)*. Author index. Subject index. Cumulative index vols. I-XX.

Please write to the publisher at the address mentioned below for additional information on the series.
